

Web services will allow us to realise the vision that was originally set for components, because the Service has a comprehensive specification that components lack. In many ways Services are an extension of components, creating the precision and formality around the interface and service offering, and therefore many of the process aspects of CBD are applicable to delivering and using Services.

Moving to Web Services?

As you commence working with web services many issues arise. Ameritas, in conjunction, with the CBDI Forum can help you save time and money. We can provide unique insight on the technologies and best practice in Service Oriented Architectures.

CBDI Workshops and Briefings

Over the past 24 months the CBDI Forum has developed a comprehensive set of thinking and materials that define the scope and practice of service based architecture. Working with industry leaders this thinking has been developed into practical guidance on Service Oriented Architectures and Processes. Ameritas is pleased to offer this insight and guidance to its customers, in conjunction with the CBDI Forum.

CBDI Workshops

Most organizations are looking carefully at how they should both utilize and adopt services; but they lack clear guidance on what to do and when. CBDI workshops are designed to assist you in both understanding and communicating the issues regarding adopting a more service based approach, and adopting and managing new XML Web Service technology.

The workshops are targeted at the people who will be involved with a SOA based project, such as Technical Architects, Business Analysts and Team Leaders. Each course follows a structured outline, but can be tailored to meet the requirements of the individual organisation.

CBDI Consulting Services

Many organizations require assistance in adopting Service based applications. Ameritas can assist in a number of areas including Architecture and Policy development, Platform and Tool selection, Process and or SDLC customisation.

Ameritas and The CBDI Forum

The CBDI Forum is an independent analyst firm and think-tank, providing a focus for the industry on best practice in business software creation, reuse and management.

Their mission is to provide unique insight on component and web service technologies and processes for the software industry and its customers; to provide high quality analysis and other information resources on best practice in business software creation, reuse and management; to maintain the highest level of independence.

Ameritas is a founder member of this dynamic forum. Our projects use an approach that conforms to best practices for Component Based Design and Development of software.

If you require any further information on Ameritas or The CBDI Forum and their range of services please contact us.
