Training Services

Ameritas provides a high quality, specialist IT training service which can be tailored to your requirements. We offer a wide range of courses for delivery either in-house or off-site as public courses. Course content can be adapted to suit customer needs and we are also happy to provide individually designed courses within or outside our portfolio.

The Application Development Lifecycle

Ameritas training services centre on the application development lifecycle, consequently our core offerings cover all areas of the cycle:

- Methodologies and approaches;
- Application architectures;
- Database design and maintenance;
- Programming and development languages;
- Use of tools and applications.

Meeting your requirements

Before we provide any training, we first ensure that we understand your requirements. If you are simply looking for professional certification, we can arrange the relevant courses for you. If, however, you are filling a skills gap, we will first work with you to identify exactly what the gap is, and then recommend ways to fill it.

Flexibility is key

Everyone's requirements are different. This is why we offer a range of ways to deliver your training, taking into account the three main factors to deliver a suitable course:

- Location;
- Audience;
- Content.

All of our courses can be delivered as private courses on your premises, and many of our courses are also run as regular public courses at our training centres. Wherever the course is held, it is important to understand the audience and what they are looking to gain. If appropriate we can tailor the course content, or level to suit the audience.

Certification and accreditation

Ameritas is currently able to offer courses for certification or accreditation from Microsoft, Oracle and Computer Associates. If your chosen course does not carry a professional accreditation we can also offer formal testing to measure the performance of the candidates.

Ameritas training course highlights

The course areas described below should give you an idea of what Ameritas can offer, from its catalogue of over 100 key courses. For a detailed list, or to discuss your requirements in more detail, please contact us.

Methodologies and approaches

- Component Based Design (CBD)
- Rational Unified Process (RUP)

- Other modelling notations and techniques (IE, IDEF, SSADM)

Languages and development languages

- Programming for .NET
- C (C++ and C#)
- Visual Basic
- Java, including J2EE and EJB
- XML

Application architectures

- Distributed applications
- Enterprise architecture
- Infrastructure development
- Application development

Database design and maintenance

- Database design
- Database administration
- Datawarehousing
- Oracle database and applications
- SQL Server database

Tools and Applications

- Advantage Gen and the AllFusion Modeling Suite from Computer Associates
- Select products from Aonix
- Oracle applications
- Microsoft Visual Studio

If you require any further information on Ameritas and its range of services please contact us.

"Languages such as J2EE, XML and other ecommerce-related skills are sadly lacking and this skills gap will continue unless employees get more training"

Tim Conway, CSSA
